

# Frequently Asked Questions (FAQs)

S SERIES

## ■ Is the S-series compatible with any non-communicating gas furnace?

- Yes, through the D24V Gateway adaptor, that allows you to connect:
  1. The S-series AC Outdoor
  2. One of the Amana EEV communicating coils (CAPEA/CAPE/CHPE)
  3. And the Amana Brand Smart Thermostat
- If the existing furnace is a communicating furnace it can be used also, as long as it can be operated in a 'legacy, non-communicating' manner.
- **ONLY available** for the S-series Air Conditioner outdoor models (Southeast and North)
- **Not available for Southwest region.** In order to rate the systems with the D24V, we have to create AHRI ratings that are coil only ratings. As such, but doing so, we do not get the benefits of the indoor ECM motor (lower Watts), so it will not meet the SW EER (EER2) requirements as a coil only rating.
